### **DataBrake's BrakeAlert Intelligent Brake Light System**

We at Ontrack are totally committed to health and safety in our workplace, so we started to progressively introduce the Brake Alert system into our fleet in 2005, as we purchased new vehicles. We were confident that the system would reduce nose-to-tail collisions, and therefore protect our staff from injury and even death.

Ontrack operates a large fleet of vehicles 420 in total, with many of these vehicles being vans, Ute's and trucks.

In 2008, we were pleased that our insurance broker found that there was not one nose-to-tail accident across our entire fleet in the prior year. This resulted in the insurance premium for our fleet being reduced by 30%. Clearly, this paid for the installation of the BrakeAlert units many times over, not to mention the other direct cost savings from not having vehicles off the road, or of staff being injured on the job.

We would urge other fleet operators to install BrakeAlert in their vehicles.

Sincerely

Peter Morton  
National Plant & Equipment Manager
